

6 STEPS TO PREPARE YOUR BUSINESS THIS SEASON

1 PROPERTY

Carry out an objective evaluation of your property. Confirm that it is reinforced, the roof drains are clean, and everything is well prepared in the event of a storm or hurricane.

You can do it yourself if you have the knowledge; otherwise, it is recommended that you identify an engineer or specialist who can make the best recommendations.

2 EQUIPMENT

If you have equipment such as air conditioners, generators, cisterns, or others on the roof, make sure they are well anchored.

Also, assess the risks your location may present. Don't forget to make periodic inspections, securing all elements out in the open that could cause damage to your company.

3 INSPECTION

If you have a generator, storage tank, fleet, or other, remember to do a weekly inspection to ensure its functionality and oil and fuel levels.

And of course, if you need supply, don't hesitate to call American Petroleum to get it ready!

4 EVALUATE YOUR PROPERTY

Evaluate your property to make sure that the roofs, the windows, and your surroundings are ready and safe.

If necessary, purchase and install shutters to stay prepared.

5 COMMUNICATION

Make sure you have the contacts of your employees, suppliers, and external support team. Also, confirm that they have an emergency plan in place.

Create a communication plan so that you can communicate with all of these groups.

6 STAY INFORMED

Tune in to radio and television for up-to-date weather information.
